DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-2, 5-7, 9, 11 rejected under 35 U.S.C. 102(e) as being anticipated by Yang et al. (US 7,206,418 B2).

Re claim 1, Yang et al. disclose of the method to reduce noise in a noisy speech signal, comprising: the steps of applying at least two versions of said noisy speech signal to a first filter, said first filter outputting a speech reference signal, said speech reference signal comprising a desired signal and a noise contribution (fig.2,3A; col.2 line 35-40, col.5 line 8-20) and at least one noise reference signal, each of said at least one noise reference signals comprising a speech leakage contribution and a noise contribution (fig.2,3B; col.5 line 25-37), applying a filtering operation to each of said at least one noise reference signals, and subtracting from said speech reference signal each of said filtered noise reference signals, yielding an enhanced speech signal (fig.4 wt (450,434); col.9 line 44-49; col.10 line 5-19), characterized in that whereby said filtering operation is performed with filters having filter coefficients determined by taking into account speech leakage contributions in said at least one noise reference signal

10/564,182 Art Unit: 2615

minimizing a weighted sum of the speech distortion energy and the residual noise energy, said speech distortion energy being the energy of said speech leakage contributions in said enhanced speech signal and said residual noise energy being the energy in the noise contributions of said speech reference signal in said enhanced speech signal and of said at least one noise reference signal in said enhanced speech signal (fig.4 wt (450); col.10 line 10-19).

Re claim 2, the method to reduce noise according to claim I, as in claim 1, wherein said at least two versions of said noisy speech signal are signals from at east two microphones picking up said noisy speech signal (fig.3B, col.5 line 22-27/plurality of microphones).

Re claim 5, the method to reduce noise according to claim 1, wherein said speech reference signal is delayed before performing the subtraction step (fig.3A wt (312); col.6 line 30-32).

Re claim 6, the method to reduce noise according to claim 1, wherein additionally a filtering operation is applied to said speech reference signal and wherein said filtered speech reference signal is also subtracted from said speech reference signal (fig.4 wt (432,434)).

Re claim 7, the method to reduce noise according to claim 1, further comprising the step of regularly adapting said filter coefficients, thereby taking into account said speech leakage contributions in each of said at least one noise reference signal signals or taking into account said speech leakage contributions in each of said at least one noise reference signals and said

10/564,182 Art Unit: 2615

desired speech contribution in said speech reference signal (fig.4 wt (450); col.10 line 11-18; col.9 line 44-47).

Re claim 9, the signal processing circuit for reducing noise in a noisy speech signal, comprising a first filter, said first filter having at least two inputs and being arranged for outputting a speech reference signal and at least one noise reference signal (fig.2 wt (214)), a filter to apply said speech reference signal to and filters to apply each of said at least one noise reference signals to (fig.2, fig.3A,3B), and summation means for subtracting from said speech reference signal said filtered speech reference signal and each of said filtered noise reference signals(fig.4 wt (434)).

Re claim 11, the signal generating-processing circuit according to claim 9, wherein said beamformer filter is a delay-and-sum beamformer (fig.3A).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al. (US 7,206,418 B2) and further in view of Marsh (US 6,178,248 B1).

10/564,182 Art Unit: 2615

Re claim 13, the signal processing circuit according to claim 9, with the signal processing circuit, However, Yang et al. fail to disclose of the signal processing circuit is

implanted in a prosthetic hearing device. However, Marash disclose of an adaptive &

beamforming system wherein the signal processing circuit is implanted in a prosthetic hearing

device (col.1 line 11-16; col.2 line 20-29) for the purpose of providing improved intelligibility to

the hearer and compensating for background noise. Thus, taking the combined teaching of

Yang et al. and Marash as a whole, it would have been obvious for one of the ordinary skill in

the art at the time of the invention to have modify Yang et al. by incorporating the adaptive &

beamforming system wherein the signal processing circuit is implanted in a prosthetic hearing

device for the purpose of providing improved intelligibility to the hearer and compensating for

background noise.

5. Claim 3-4,10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al. (US 7,206,418 B2) and further in view of Hoshuyama (US 6,449,586 B1).

Re claim 3, the method to reduce noise according to claim 1, wherein said first filter is a spatial pre-processor filter, comprising a beamformer filter and a blocking filter (fig.2 wt (214a, 214b)), However, Yang et al. fail to disclose of the specific wherein the blocking filter being the specific of the blocking matrix filter. However, Hoshuyama disclose of a beamforming adaptive enhancing signal wherein the blocking filter being the specific of the blocking matrix filter (fig.24-27,35; col.5 line 62-65) for the purpose of processing group of signals. thus, taking the

10/564,182 Art Unit: 2615

combined teaching of Yang et al. and Hoshuyama as a whole, it would have been obvious for one of the ordinary skill in the art at the time of the invention to have modify Yang et al. by incorporating the beamforming adaptive enhancing signal wherein the blocking filter being the specific of the blocking matrix filter for the purpose of processing group of signals.

Re claim 4, the method to reduce noise according to claim 3, wherein said speech reference signal is output by said beamformer filter and said at least one noise reference signal is output by said blocking matrix filter (col.5 line 8-39).

Re claim 10, the signal processing circuit according to claim 9, wherein said first filter is a spatial pre-processor filter, comprising a beamformer filter and a blocking filter (fig.2 wt (214a,214b)), However, Yang et al. fail to disclose of the specific wherein the blocking filter being the specific of the blocking matrix filter. However, Hoshuyama disclose of a beamforming adaptive enhancing signal wherein the blocking filter being the specific of the blocking matrix filter (fig.24-27,35; col.5 line 62-65) for the purpose of processing group of signals, thus, taking the combined teaching of Yang et al. and Hoshuyama as a whole, it would have been obvious for one of the ordinary skill in the art at the time of the invention to have modify Yang et al. by incorporating the beamforming adaptive enhancing signal wherein the blocking filter being the specific of the blocking matrix filter for the purpose of processing group of signals.
